

**Renewable Standard**

Percentage of electricity provided to ComEd and Ameren customers that must come from renewable energy sources:

- at least 2% by June 1, 2008;
- at least 4% by June 1, 2009;
- at least 5% by June 1, 2010;
- at least 6% by June 1, 2011;
- at least 7% by June 1, 2012;
- at least 8% by June 1, 2013;
- at least 9% by June 1, 2014;
- at least 10% by June 1, 2015; and
- at least 1.5% increase each year thereafter to total 25% or more by June 1, 2025.

Electricity must come from renewable energy sources in Illinois to the extent that renewables are available in Illinois -- this promotes clean air and economic development. At least 75% of renewable energy must come from wind, to the extent that wind is available in Illinois. The standards can be met by electricity generated using wind, solar thermal energy, photovoltaic cells and panels, biodiesel, landfill gas, crops and untreated and unadulterated organic waste biomass, trees and tree trimmings, and hydropower that does not involve new construction or significant expansion of hydropower dams. Electricity from waste incinerators, except those that burn untreated and unadulterated waste wood, is not considered renewable energy.

**Energy Efficiency Standard**

Energy efficiency measures must be implemented to achieve annual energy savings for ALL electricity DELIVERED by ComEd and Ameren (not just electricity sold by these utilities) in the following amounts:

- at least 0.2% of energy delivered in the year commencing June 1, 2008;
- at least 0.4% of energy delivered in the year commencing June 1, 2009;
- at least 0.6% of energy delivered in the year commencing June 1, 2010;
- at least 0.8% of energy delivered in the year commencing June 1, 2011;
- at least 1% of energy delivered in the year commencing June 1, 2012;
- at least 1.4% of energy delivered in the year commencing June 1, 2013;
- at least 1.8% of energy delivered in the year commencing June 1, 2014; and
- at least 2% of energy delivered in the year commencing June 1, 2015, and each year thereafter.

**Demand Response Standard**

ComEd and Ameren are also required to reduce peak demand for the customers who purchase electricity from them by implementing demand-response measures (e.g., direct load controls on central air conditioning systems) to reduce peak demand by 0.1% over the prior year, starting June 1, 2008, and continuing through each of the next ten years. This will help ComEd and Ameren customers avoid purchasing electricity in peak periods, when it is most expensive.
